

Travelling Flight

When we first decided to make the lightest of regulators we started with a blank canvas and looked at every aspect of the regulator from materials to shape, form and functionality. Our expertise and the vast archive of knowledge we have built up over the years, making the finest regulators, has produced Flight.

Apeks is known throughout the world for dive equipment of quality, craftsmanship and durability. Due to innovative design and the use of advanced materials Flight regulators meet our high standards. They are tough, reliable and strong enough to cope with the demands and rigours of travelling. Due to both warm and cold water specification each Flight regulator is suitable for diving in all waters. They are the most compact Apeks regulators ever made – small yet fully loaded with high performance and comfort. Ideal for every dive journey from a visit to your local dive centre to an exotic trip overseas.

Don't miss your Apeks Flight
The lightest scuba regulator in the world

Each Flight regulator comes complete with a free light weight sport bag. The range comprises 3 colour variations including a Flight specially for women, male and female octopus and M26 Nitrox.
